July 20 1918

Body of May Monde has been declared dead , death by loss of blood and a contract of body disposition has been signed on July 19, the body will be getting ready for the Oxoat.

July 22 1918

Body has been set on the operation table, and the procedure will start at 04:00 am on the next day.

July 23 1918

08:00 am

Start of the procedure. Body set on the table, no signs of life, subject is confirmed dead one more time.

08:35

A section from the neck to the abdomen is cut, identification of damaged organs procedure.

08: 48

Damaged liver and digestive system due to poor nutrition and physical conflits

09:15

Lungs are highly damaged by nicotine and tabac and perforation by rib cage softly piercing in.

09:36

High doses of morphine are still found in the body.

10:48

The Oxoat is extracted from its warm environment, the Oxoat is currently 43 cm L and 15 cm l , it weighs only 9 kg , extremely weak.

11:00

The procedure of remove of the subject inner organs and bones will start , place for the Oxoat.

11:50

Opening of rib cage, first 8 cm removed.

12:30

Removal of liver, digestive system, lungs , vocal cords

13:15

The rib cage has been removed , so was the spine.

14:05

The Oxoat have been placed in the torso.

14:50

The entire opening has been stitched back.

July 24 1918

Start of the essay period of the Oxoat inside subject May Monde.

July 30 1918

Oxoat has lodged inside May Monde for 6 days and changes are already occurring. The body is still dead yet convulses

If log not updated, it means no signs of life were found.

August 27 1918

Subject vomits liquefied muscles as well as wretched the remaining bones
Signs of Oxoat stretching the flesh layer of May Monde.

September 15 1918

First signs of activity on the subject May Monde. Groans can be heard and when mouth pulls , we can observe Oxoat wiggling around. Affirming that it has taken the mold correctly.

September 29 1918

Oxoat is trying to find it's place in the skull, it has accidentally removed May Monde right eyeball , will be put back into place, for now Oxoat is in perfect health.

November 07 1918
First signs of communication! Oxoat has fully settled in the host , groans have turned into voice and tone attempts, a lot of mimicking still. Note that May Monde history is mentioned, meaning Oxoat has also englobed the brain nerves.

December 15 1918

May Monde said their first words with Oxoat inside : “ where “ May is able to participate in a conversation, not by talking but following with their eyes the person who is talking. Brain is réceptive and nerves answer to stimulus.

December 20 1918

First signs of struggles from May Monde to contain Oxoat . A lot of vomiting and screaming, so,vocal cords are intact and muscles seems to work quite well.

December 22 1918

First signs of mimicking Clarissa Kamau voice , perfect imitation.

December 27 1918

Hands tissue has fully healed, it seems the claw shape will be permanent, the stitches are almost invisible too , the face scar will be kept intact like Monde has requested.

January 20 1919

The entire body gives great results , first tests of endurance will be made

January 22 1919

Endurance complete failure, Oxoat seems to want to crawl , damaging May Monde tissues on accident.

January 30 1919

Second attempt, a success, May Monde can stand for 3 minutes and 28 seconds. Neuron activities still need some work.

March 09 1919

Multiple tests have been going on with an average rate of success, one of the fastest adaptations of the subject. A joke seemed to be made by May Monde , by pointing at Liam Miller's uncovered face then pointing at a pool of their own blood , perhaps a gruesome comparaison. Neuron results show nerve activity but slower than an average human. A lot of mimicking voices and repeating to communicate.

April 13 1919

Cérébral seems to be back to normal, obviously it will all become clearer later but May Monde is conscious, due to the breakdown from 23:00 to 05:00 am breakdown, wracking fournitures and damaging walls. Full sentences can now be made. Advanced procedure can start

April 18 1919

Advanced procedure 01 has been executed. May Monde has been tied up conscious while Muzochi Eimi has shot from 5 mm to 9 mm at them. The first layer of skin , May Monde, is transperced and soft bleeding can be seen. But they do not pierce Oxoat skin , letting the bullet either bounce off or get stuck in between May's layer and Oxoat outside.

April 24 1919

Second procedure 02 has been executed. The first layer can be removed with ease without damaging the insides of Oxoat. Oxoat mouth stretches May Monde’s and softly rip the skin , opening the head layer with ease. Oxoat is then able to take off the layer of the host and roam freely , it has grown strong from the insides of the subject. Then it easily wears back and closes it. Note at least 4 to 8 hours until the cut disappears.

May 18 1919

Third and final procedure, cognitive and cérébral attachment between May Monde and Oxoat. Fail.

May 26 1919

All tests are positive, another attempt at procedure 03 will be made as May Monde state has been stabilized.

June 11 1919

Incredible results during procedure 03 ! May Monde will now be affiliated under the fourth division and will follow Towa Stote orders.
